OXY5638B a powerful rugged EPIC SBC is driven by Intel® Broadwell processor i3-5010U, i5-5350U and i7-5650U soldering onboard. Broadwell processors support outstanding graphics and CPU performance, providing quad cores 3.20GHz clock speed while consuming low power consumption. The powerful combination makes the SBC with high computing power for multi-tasking while reducing idle power consumption. OXY5638B is regarded as a rich-featured board that can be applied to cater various I/O requirements. Mission-critical applications can take the advantages of processors soldering onboard and extended operating temperature from -40 to 85°C to ensure ultimate durability, utmost resistance to shock & vibration. OXY5638B is truly a rugged SBC ideal for building rugged tablet, entry-level automation and railway infotainment applications. The Intel Core i7-5650U is an ULV (ultra low voltage) dual-core processor based on the Broadwell architecture. In addition to two CPU cores with Hyper-Threading clocked at 2.2 - 3.2 GHz (2 Cores: 3.2 GHz), the chip also integrates an HD Graphics 6000 GPU and a dual-channel LPDDR3-1866/DDR3L-1600 memory controller. The Core i7 is manufactured in a 14 nm process with FinFET transistors. Compared to the Core i7-5600U, the i7-5650U features a lower CPU base clock, but integrates a somewhat faster GPU.

Thermal solution for fanless system design

Heat sinks are used to cool down device temperature by dissipating heat into surrounding air. PERFECTRON designs tailor-made heat sink for OXY5638B. Special fin ditch design forms a wind-flow to reduce thermal resistance. Moreover, cross section wave line on the interface increases up to 30-40% air contact area. Combining these two features, thermal performance leverages to utmost that ensures high reliability and stability while working under wide range temperature from -40 up to 85°C.
